Delta Industrial Builds a Rock Solid Foundation

Dedicated to quality, turnkey industrial contractor completes a multiple phase construction project at a new manufacturing facility.

Rochester Hills, MI. – Delta Industrial has completed extensive foundation work at the new Copper and Brass manufacturing facility.

The work performed included the design and construction of several foundations and pits of varying sizes for band saws used to cut materials up to 18 inches in diameter and other plant machinery. In addition to the pits, Delta’s engineers designed and built trenching for cooling solutions and electrical supplies for the equipment along with a conveyor system to carry away metal fragments. The existing concrete floor had to be demolished and repaved when the work was finished.

Delta Industrial, the recognized leader in machine foundations, press pits and industrial concrete construction has offices in Chesterfield Michigan, Trussville Alabama, and Fort Thomas Kentucky. The company, founded in 1993, specializes in the design and construction of machine and press foundations, concrete flat work and steel fabrication.

About Delta – We are a “Full Performance,” company with the ability to control every aspect of construction and we own all the necessary construction equipment. We are well versed in cutting edge construction techniques and are able to assist our clients from concept through design to finished product. We have worked with a wide and diverse base of companies throughout the country.
